

WEB-BASED MONITORING AND CONTROL FOR FACILITY MANAGEMENT

OVERVIEW

i.Browse® provides facility managers and authorized end-users with reliable, secure Internet access to information about a facility. i.Browse includes a custom-tailored Web site - to monitor and control devices on a LonWorks® network as needed, through a Web browser, from any location.

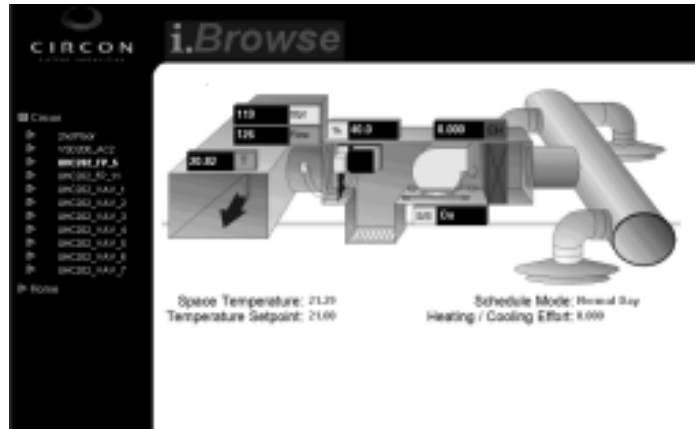

For system integrators who need to allow control information (network variables) to be accessed easily through a Web browser, i.Browse combines outstanding Plexus Web server software with Circon's Engineering Services in a custom Web interface solution.

i.Browse Enhanced

Working from a specification and the complete facility automation system database, Engineering Services blends graphical images and dynamic HTML with the customer's corporate identity to create unique, custom Web pages.

ORDERING INFORMATION

Part numbers: 10-0402

FEATURES AND BENEFITS

- Monitor and control Circon and 3rd party LonWorks devices from wherever you may be - using Microsoft® Internet Explorer, Mozilla FireFox, or other standard browsers
- Implement simplified Web interfaces for casual end-users to provide higher levels of flexibility, convenience and intelligence
- Add i.Browse to existing sites with no change to installed devices
- Password protection prevents unauthorized access
- Outstanding Plexus Altitude Web server software and Circon Engineering Services combine to provide custom Web server solutions
